Registered Office: Exova (UK) Ltd, Lochend Industrial Estate, Newbridge, Midlothian EH28 8PL United Kingdom. Reg No.SC 70429 This report in issued in accordance with our terms and conditions, a copy of which is available on request.

0249

Executive Summary

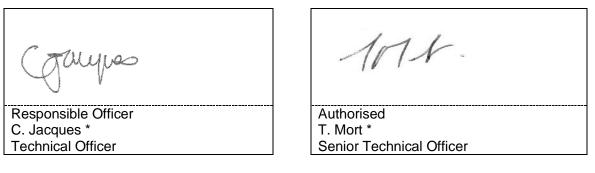

Objective To determine the performance of the following material when tested in accordance with Section 7 - "Horizontal Burning Test for Classifying materials HB" of UL94 - `Test for Flammability of Plastics Materials for Parts in Devices and Appliances'.

Generic Descript	Description Product reference			Thickness	Density
Polyethylene	"lcorene® 3560" 8.04mm* 0.935g/			0.935g/cm ³	
*determined by E	*determined by Exova Warringtonfire				
Please see page 5 of this test report for the full description of the product tested					tested
Test Sponsor	Pineapple Contracts, Murray Road, Orpington, Kent, BR5 3QY				
Test Results:	When the t	test results are assessed	using the t	est criteria s	pecified in the

Standard, the material, when tested at a nominal thickness of 8mm, is classified as "HB".

Date of Test 8th June 2015

Signatories

* For and on behalf of Exova Warringtonfire.

Test Details

specimens

Purpose of test To determine the flammability of a plastics material when it is tested in accordance with the test procedure specified in Section 7 - "Horizontal Burning Test for Classifying materials HB" of UL94 - `Test for Flammability of Plastics Materials for Parts in Devices and Appliances'.

Each specimen was tested in accordance with the test method specified in the Standard, the gas supplied to the Bunsen burner being methane. This report should be read in conjunction with Section 7 of UL94.

Scope of test The requirements of UL94 cover plastics materials and are intended to serve as a preliminary indication of their suitability with respect to flammability for a particular application. The requirements may be applied to other non-metallic materials, if found to be appropriate.

The final acceptance of a material by the Underwriter's Laboratories Inc. is dependant upon its use in complete equipment which conforms with the Standards applicable to such equipment.

- Fire test study group/EGOLF Certain aspects of some fire test specifications are open to different interpretations. The Fire Test Study Group and EGOLF have identified a number of such areas and has agreed Resolutions which define common agreement of interpretations between fire test laboratories which are members of the Groups. Where such Resolutions are applicable to this test they have been followed.
- **Instruction to test** The test was conducted on the 8th June 2015 at the request of Pinapple Contracts, the sponsor of the test.
- Provision of test
specimensThe specimens were supplied by the sponsor of the test.ExovaWarringtonfire
was not involved in any selection or sampling procedure.
- **Conditioning** of The specimens were received on the 4th June 2015.

Three specimens were conditioned for at least 48 hours at a temperature of 23 \pm 2°C and a relative humidity of 50 \pm 5% prior to testing.

Description of Test Specimens

The description of the specimens given below has been prepared from information provided by the sponsor of the test. All values quoted are nominal, unless tolerances are given.

Generic type	Polyethylene
Product reference	"Icorene® 3560"
Name of manufacturer	See Note 1 Below
Thickness	8.04mm (determined by Exova Warringtonfire)
Density	0.935g/cm ³ (stated by sponsor)
	1.54g/cm ³ (determined by Exova Warringtonfire)
Colour reference	"Orange" (Observed by Exova Warringtonfire)
Flame retardant details	See Note 2 Below
Brief description of manufacturing process	See Note 2 Below

Note 1: The sponsor of the test has provided this information but at the specific request of the sponsor, these details have been omitted from the report and are instead held on the confidential file relating to this investigation.

Note 2: The sponsor was unable to provide this information.

Test Results

Results

The following	results were	obtained for	each of the s	pecimens tested.

	Time for flame Time for flame		lf 100mm marl		
Specimen Number	front to reach 25mm mark (Seconds)	front to reach 100mm mark (Seconds)	Time for flaming to cease (Seconds)	Distance Flame reached from test edge (mm)	Burning Rate (mm/minute)
1	121	499	Not Applicable	Not Applicable	11.90
2	104	384	Not Applicable	Not Applicable	16.07
3	116	630	Not Applicable	Not Applicable	8.75

UL94 states that a material classed HB shall: Conclusion

- (a) Not have a burning rate exceeding 40mm per minute over a 75mm span for specimens having a thickness of 3.0-13.0mm, or
- (b) Not have a burning rate exceeding 75mm per minute over a 75mm span for specimens having a thickness less than 3.0mm, or
- (c) Cease to burn before the 100mm reference mark.

When the test results are assessed using the test criteria specified in the Standard, the material, when tested at a nominal thickness of 8mm, is classified as "HB".

Applicability The test results relate only to the behaviour of the test specimens of the product of test results under the particular conditions of test; they are not intended to be the sole criterion for assessing the potential fire hazard of the product in use.

> The test results relate only to the specimens of the product in the form in which they were tested. Small differences in the composition or thickness of the product may significantly affect the performance during the test and may therefore invalidate the test results. Care should be taken to ensure that any product which is supplied or used is fully represented by the specimens which were tested.

The specification and interpretation of fire test methods are the subject of Validity ongoing development and refinement. Changes in associated legislation may also occur. For these reasons it is recommended that the relevance of test reports over five years old should be considered by the user. The laboratory that issued the report will be able to offer, on behalf of the legal owner, a review of the procedures adopted for a particular test to ensure that they are consistent with current practices, and if required may endorse the test report.

> This report may only be reproduced in full. Extracts or abridgements shall not be published without permission of Exova Warringtonfire.
